Statistics

STAT 200  **Statistical Analysis**  credit: 3 hours.
Principles in statistical design and analysis motivated by real case studies. Statistical computing is introduced and used for data
analysis. Theory and techniques include survey sampling, hypothesis testing, contingency tables, Poisson models, regression analysis,
and response surface analysis. The vital role of statistics in science is illustrated by case studies, and students learn principles related
to study design, data collection, data presentation, and statistical computing, as well as technical writing and communication skills.
Prerequisite: MATH 220.

This course satisfies the General Education Criteria for an:
Quantitative Reasoning I
