Class Schedule - Spring 2008

Physics

PHYS 199  Undergraduate Open Seminar  credit: 1 TO 5 hours.
Approved for both letter and S/U grading. May be repeated.

Independent Study
Instructor Approval Required
INDEPENDENT STUDY. To register for independent study under PHYS 199, use the PHYS 199 CRN (available from the departmental undergraduate records office) specific to the instructor with whom you have arranged to work. (You cannot register under the general CRN 10145.)

Credit Hours: 1 hour
Behavior of Complex Systems
Discovery course.
EXPLORING THE BEHAVIOR OF COMPLEX SYSTEMS: CHAOS, FRACTALS AND ARTIFICIAL LIFE, 1 hour. The behavior of complicated systems with many parts will be explored with hands-on computer simulations and lab experiments. Students will experiment with lightning, turbulence, explosions, and human rhythms and use simple computer models to imitate their irregular and symmetric patterns and dynamics and will develop an intuition as to why isolated complex systems prefer harmony and symmetry whereas competing complex systems prefer chaos. Applications in business, engineering, and social sciences will be discussed.
First Year Discovery Program Course. Registration restricted to freshmen. Students should enroll in only one Discovery course.

Credit Hours: 1 hour
Science and Pseudoscience
Discovery course.
SCIENCE AND PSEUDOSCIENCE, 1 hour. The world we live in continues to develop at an amazing rate, with much of that development fueled by science and technology. Despite the overwhelming impact that scientific advances have on our society, a large number of people continue to hold irrational, unsupported beliefs in things like extrasensory perception, alien abductions and psychic crime-solvers. This one hour course will take a critical look at some of these beliefs from the standpoint of scientific inquiry and exploration. We will discuss the scientific method, how science progresses and the types of argumentative fallacies that pervade the pseudoscientific community. In addition, we will discuss examples of good science, and show how the scientific method is self-correcting. Students will have an opportunity to research paranormal claims, as well as play "devil's advocate" during in-class debates. This course is aimed at nonscientists (although science majors could benefit from the course as well) with the specific goals of teaching students how to be thoughtful, skeptical consumers of information and the importance of the scientific method.
First Year Discovery Program Course. Registration restricted to freshmen. Students should enroll in only one Discovery course.

Credit Hours: 1 hour
Honors Mechanics
HONORS SEMINAR: TOPICS IN MECHANICS. PREREQUISITES: CONCURRENT REGISTRATION IN PHYS 211 AND CONSENT OF INSTRUCTOR. PHYS 199HM CAN BE USED TO SATISFY THE HONORS COMPONENT OF PHYS 211. PHYS 199HM is the honors supplement to PHYS 211 and is intended for those students intending to major in physics or who have a strong interest in the subject. Areas to be addressed include rotational and central force motion, non-inertial frames, non-linear systems and post-Newtonian mechanics. The use of simple visualization tools such as Mathematica and Excel will be encouraged.

| 38671     | Lecture-Discussion | HO     | 01:00 PM - 02:50 PM | M          | 139 - Loomis Laboratory | 1 hours      | Honors Electricity & Magnetism  
HONORS SEMINAR: TOPICS IN ELECTRICITY AND MAGNETISM. PREREQUISITES: PHYS 211, CONCURRENT REGISTRATION IN PHYS 212, AND CONSENT OF INSTRUCTOR. PHYS 199HO CAN BE USED TO SATISFY THE HONORS COMPONENT OF PHYS 212. Students investigate special topics in electricity and magnetism. Through weekly meetings (similar in format to the discussion sections of Physics 211 and 212), students will derive for themselves some of the surprising features of our post-classical physical world. For example, the need for special relativity, the existence of magnetic fields, and the origin of electromagnetic radiation are consequences of simple observations such as the constancy of the speed of light. Other topics will include the nature of Gauss' law and Maxwell's equations, potentials and superposition, amplifiers, analog computers, and the role of quantum mechanics in electrodynamics. PHYS 199HO is intended for students who have been comfortable with the level of difficulty of PHYS 211, and whose math skills are fairly strong. It allows students to confront in greater depth some of the most interesting intellectual issues in classical electrodynamics. The course will use calculus as a problem-solving tool. |
| 38673     | Discussion/Recitation | M1     | 10:00 AM - 11:50 AM | R          | 234 - Loomis Laboratory | 1 hours      | Enrichment Mechanics  
Section M1 (or M2 or M3 or M4) is only for students taking Spring 2008 PHYS 211 who took Fall 2007 PHYS 100. |
| 38563     | Discussion/Recitation | M2     | 01:00 PM - 02:50 PM | R          | 234 - Loomis Laboratory | 1 hours      | Enrichment Mechanics  
Section M2 (or M1 or M3 or M4) is only for students taking Spring 2008 PHYS 211 who took Fall 2007 PHYS 100. |
| 38564     | Discussion/Recitation | M3     | 03:00 PM - 04:50 PM | R          | 234 - Loomis Laboratory | 1 hours      | Enrichment Mechanics  
Section M3 (or M1 or M2 or M4) is only for students taking Spring 2008 PHYS 211 who took Fall 2007 PHYS 100. |
| 41744     | Discussion/Recitation | M4     | 05:00 PM - 06:50 PM | R          | 234 - Loomis Laboratory | 1 hours      | Enrichment Mechanics  
Section M4 (or M1 or M2 or M3) is only for students taking Spring 2008 PHYS 211 who took Fall 2007 PHYS 100. |
| 46682     | Laboratory-Discussion | POM    | 01:00 PM - 02:50 PM | F          | 6105 - Engineering Sciences Building | 2 hours      | Physics of Music & Instruments  
Discovery course.  
PHYSICS OF MUSIC / PHYSICS OF MUSICAL INSTRUMENTS, 2 hours. This course will cover the following topics and will have accompanying lab demonstrations and experimental setups for hands-on direct learning experiences for the students: the physics of sound (propagation of sound waves), the physics of hearing (psycho-acoustics), the physics of music (all musical styles, and music in the natural world -- living organisms and physical processes), the physics of musical instruments (brass, wind, strings percussion, song, electronic, computer and beyond). First Year Discovery Program Course. Registration restricted to freshmen. Students should enroll in only one Discovery course. |
