CHEM 592  Preparing Graduate Fellowships  credit: 1 hours.
This course assists first- and second-year graduate students as well as a selected few senior undergraduate students in their efforts to
obtain external grants and fellowships. Using the National Science Foundation (NSF) Graduate Research Fellowship Program (GRFP)
as an example, the course provides the students with general information and guidance about preparing grant applications. Each
student will prepare a complete application package, which can be submitted to the NSF GRFP at the end of the course, although such
submission is optional. Approved for S/U grading only. Prerequisite: For first- and second-year graduate students in Chemistry. Some
senior undergraduate students who have high GPA and research experience in faculty laboratories may enroll with the instructor's
approval.
