Comp Arch Era of Custom Accel  
Restricted to Graduate - Urbana-Champaign.  
TITLE: Computer Architecture in the Era of Custom Accelerators The end of Moore?s Law scaling for chips is having a remarkable side effect: dramatic and rising interest in special-purpose computer architectures to accelerate difficult computing tasks. Said differently: we don?t just look at faster processors, or more cores, any longer. We are willing to look at ?novel? architectures. Examples abound. GPUs are now everywhere, from phones to supercomputers. The backend of the Microsoft Bing search engine runs on FPGAs. Intel has just purchased Altera, the world?s biggest FPGA company. IBM, Intel and Qualcomm have just launched research groups to explore custom architectures to implement Machine Learning (ML) tasks. One of the world?s fastest engines for protein folding was done entirely in custom silicon; the effort was led by a rather famous Wall Street hedge fund billionaire. Indeed, much of the action in high-frequency trading for computational finance happens on FPGAs, because competitive advantage is measured in fractions of a microsecond. Something BIG is happening here. In this course, we?re going to grab several of the key papers in this area, read them and discuss them. LOGISTICS: Monday, 4-5:30 (mostly); one or a few days, Monday 5-6:30. ROOM: 3403 Siebel Center |
