**KSADS Seminar**
This seminar will focus on evidence-based assessment approaches to mental health in children, adolescents, and adults. Readings and discussion will focus mostly on core issues related to evidence-based assessment, using interview and questionnaire methods, with multiple informants (youth and caregivers) in child psychopathology. There will be a practical, experiential component in which you will learn to reliably conduct semi-structured psychiatric diagnostic interviews, especially focused on anxiety and depression, with youth and adults. You will conduct these interviews and receive ongoing clinical supervision as part of an ongoing randomized clinical trial for personalized depression prevention among youth.

Neuroscience I  
This class will meet in Room 3369 at Beckman. Neuroscience I and II is required for all first year graduate students in the Neuroscience Program. The purpose of the course is to introduce students to the breadth and inter-disciplinary nature of the field, and to the topic areas investigated broadly by faculty of the Neuroscience Program. The course emphasizes concepts and methods rather than facts, and includes discussions and career development lectures. The course is team taught by multiple NSP faculty, senior students and postdocs.
