Computer Science

CS 544  **Optimiz in Computer Vision**  credit: 4 hours.
Applications of continuous and discrete optimization to problems in computer vision and machine learning, with particular emphasis on
large-scale algorithms and effective approximations: gradient-based learning; Newton's method and variants, applied to structure from
motion problems; the augmented Lagrangian method and variants; interior-point methods; SMO and other specialized algorithms for
support vector machines; flows and cuts as examples of primal-dual methods; dynamics programming, hidden Markov models, and
parsing: 0-1 quadratic forms, max-cut, and Markov random-fields solutions. Prerequisite: CS 450 and CS 473.
